Vanmark Expands Line of Peeler/Scrubber/Washers with 1820 Series
New lower capacity machines offer continuous multipurpose processing

Creston, IA: Vanmark, an industrial potato and produce processing equipment manufacturer, has expanded its line of Peeler/Scrubber/Washers with the introduction of the 1820 Series. The new machines offer continuous multipurpose operation, ease-of-use and durability Vanmark equipment is known for, at a lower capacity range, ideal for processors looking to automate or upgrade from batch processing.

The 1820 Series Peeler/Scrubber/Washers integrate continuous washing and peeling into one machine, with a maximum flow rate of 4,000 pounds per hour. Machines are easily configured, operated and maintained for a variety of uses and products.

“We are excited to satisfy a new customer base with these models. At this capacity, the 1820 Series is designed for processors and growers who are currently batch processing potatoes and other root vegetables,” says Jason Davis, General Manager of Vanmark’s Creston, Iowa facility. “Not only will they get higher performance with continuous equipment, they can now also remove debris, polish, scrub and peel in the same machine, improving production and efficiency.”

The 1820 Series is the latest addition to Vanmark’s line of Peeler/Scrubber/Washers, offering a range of processing capabilities, from limited duty to around-the-clock operations, for potato and produce products, including small diameter products. All models are configurable – from number and types of rolls, speed and a variety of options – giving processors flexibility for a variety of uses and products. Sanitary design ensures quick, thorough cleaning and safe products. Operation, roll changes and maintenance are all performed with ease.

Vanmark will be showcasing the new 1820 Series Peeler/Scrubber/Washers at NWFPA Food & Beverage World January 8-10 in the Columbia Food Machinery booth #1350.
